AOA, I'm using VB6 with Access 2010 (DAO) and Crystal Reports 9.22. I have developed a project in VB6. It works fine at design mode, but when I install it (I mean, VB6 runtime error -2147217900 (80040e14): let me clarify. You haven't explained how you...)

I wrote a simple WCF service written in C#. I need to consume the service from VB script using MS SOAP Toolkit 3.0. I wrote a simple client code like that: Dim client. This class provides a standardized error handling mechanism to trap errors, track the...This version is VBA compatible--it contains no VB6 specific code.

Hi, I am using VB6 with MS-Access Database 2003. In creating Crystal Report 8.5, I got error message "Unable to Access First Record"—Sql error. My code is below. This is an old school VB6 application that does little more than update a local SQL it would call out to the spooler and it would return an unknown error code. A fantastic global error handler for any VBA enabled application—such as...A unique code library offering global error catching for your VBA & VB6 projects.

Text += errorCode + ": Counted records send more than number of records allowed per request.

Now when I start the VB6 exe, I get the following error: Run-time error 430. It solves a nagging problem with type library compatibility for 64-bit code. This was...

I wrote a VisualBasic6 program. When compiled, it gets a "Win32.Autorun.sp" error. The program reads text data from about 140 input files, summarizes the data.
My VB6 code runs fine on my pc. But it is throwing up 'Run time error 9
Subscript out of range' error on my client's machine. I did not use any
arrays in my code.

Today, my friend promised me to install VB6 on my laptop. Initial setup
did not complete and error'd out with error code 9c59 when using
windows update. Code from the stock subassembly DaylightBench.vb is
used as an illustration. Step 1: Remove the On Error statements in the
GetLogicalNamesImplement(). My app can read data from excel, and
has error when running like this : Run-time error And the code where the
error occurs here : Set excelWB = excelApp. We have very strange error
here for which we could not find any solution. I hope VB6 , word expert
could help us in this. We have our code in VB6. There.

I am receiving a type mismatch error after compiling vb6 code. The thing
is that only two of the users are receiving the error. Another user is not.
